

# White Paper for 'Call / SMS Regulation' Feature

## Product Feature – Call / SMS Regulation

We make calls or message text as part of our daily interpersonal communication activities. They are now as common (if not more!) an everyday activity as watching TV or listening to music.

While you speak with somebody by calling on the person's number, you use SMS or Short Message Service, commonly textmessaging, for sending short messages to mobile devices.

Now, for a company, there are issues of cost, time, and employee productivity linked to Call / SMS services. Companies providing Call / SMS facilities to employees for work may need to regulate the mobile devices to optimize phone usage.

Now, consider this ...

Your marketing and sales employees use Smartphones and Tablets for work. Of late, your company's phone call costs have been increasing month to month ... you are unable to justify the rising expenses ... While marketing and sales representatives need to stay in touch with your company's channel partners, associates, vendors, and customers, the phone call costs are becoming prohibitive. You are concerned ... How to reduce call costs? How to optimize phone usage? How to strike a balance between the rising cost and your communication needs? You are also concerned about losing productive company time as your employees seem to be spending inordinate time speaking on the phone ... you want to regulate Call / SMS facilities in the mobile devices being used for office work.

This is where MobiOcean becomes your trusted companion in a mobile-driven environment ... helping you to effectively and efficiently address mobility challenges and security threats!

With MobiOcean, you can regulate Call / SMS facilities in mobile devices to optimize phone usage and reduce call cost. Supported by a robust security mechanism, MobiOcean allows you to:

### **Make the most of the MobiOcean App Repository**

- Provides trending app repository which allows managing apps from one repository to another

### **Blacklist an App**

- Prevents the execution of undesirable programs (including those known to contain security threats and others deemed inappropriate within a given company)

### **Whitelist an App**

- Allows only what is necessary and denies everything else; prevents unauthorized apps from running; protects mobile devices and software systems from harmful applications; prevents unnecessary resource use

### **Activate Category-based Blocking**

- Restricts category-based Apps, deemed inappropriate within a given company, from being viewed stops Apps, downloaded from other sources / locations, from getting installed / used

### **Block App Installation from App Store & Outside**

- Blocks App Store; prevents Apps from getting downloaded from App Store and being installed;

### **Schedule & Clock App Usage**

- Regulates when and for how long an App can be used

Allowing the Administrator to regulate Apps in mobile devices efficiently and directly from a central console, MobiOcean helps companies to protect sensitive corporate and personal data, reduce security threats, and enhance employee productivity.
