Peanut Secure SMS

PEANUT is a privacy and security enhanced text SMS application that can be used as a Messenger application for personal or business needs. Peanut offers many features that are bene¬ficial to the user in sending messages in SMS domain.
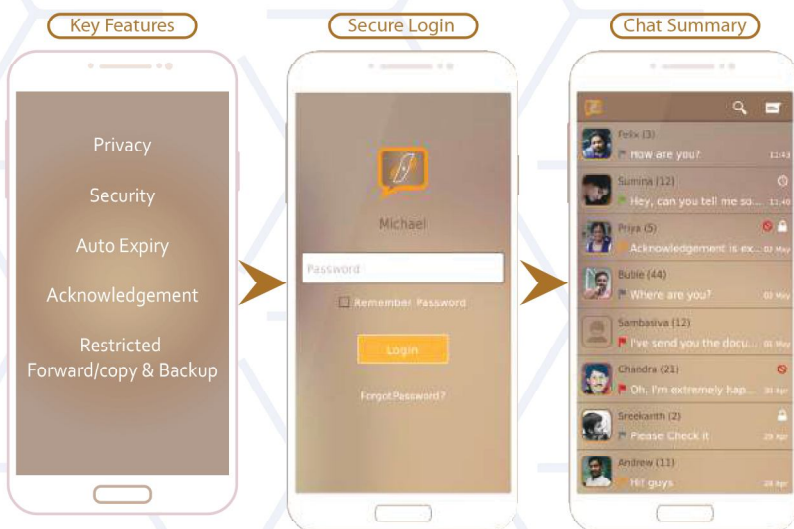

Peanut provides Protection of Data at Rest, Protection of Data in Transit, Protection of Data in Use, Protection of Data transfer to a File and Protection of Data transfer between devices. Remote Wipeout, Backup and Restore features to facilitate ease of use, convenience and HIPPA compliance of native SMS Service.

WHY ENCRYPTION?
Encryption is important because it allows you to securely protect data that you don't want anyone else to have access to.

PEANUT TECHNOLOGY
End to End encryption of messages transmitted over-the-air (OTA), as they are stored on mobile carrier networks, or as captured by legal or illegal interceptors. All messages are secured using AES 256-bit encryption. Sending a secure Text SMS is as easy as sending a message. Allows users to turn encryption ON or OFF as needed, and communicate with others who do not have the secure Messaging application.

Key Features — Privacy, Security, Auto Expiry, Acknowledgement, Restricted Forward/copy & Backup

Secure Login — Michael, Password, Remember Password, Login, Forgot Password?

Chat Summary

KEY FEATURES

Password Protected

Password protected application securing all your messages

Restricted Messages

With this feature, the recipient is not allowed to share the message to other. The recipient can only read/view the message and reply to the sender. This features is beneficial for the instances where the messages are forwarded by the recipients to other people thus causing embarrassment, inconvenience or sometimes a problem to the sender.

Remote Wipeout

In case of a misplaced, lost or stolen device, Peanut offers the user a convenient remote wipeout command that deletes all application data including Inbox, Sent Messages, Private Contacts, User Profile, and Preferences. Though data is already protected by the Privacy Interface, the Remote Wipeout feature further ensures that whoever fi¬nds the device does not have access to the user's communications.

Private Contacts

Allows the mobile user to setup a private address book and maintain con-fidentiality of those contacts. Private contacts are not accessible to other Apps downloaded on the same mobile device thus providing a key benefit to Enterprise, business, personal and professional use.

Priority Indicator

Allows the sender to inform other Peanut users of the priority of the communication they are sending.

Acknowledgement

Sender can set an acknowledgement request and the recipient will only be allowed to read the message once the acknowledgement is sent.
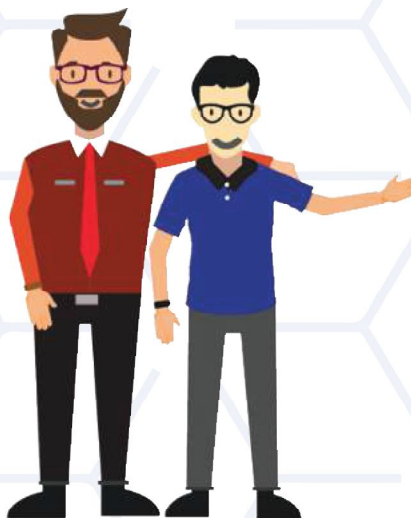

Auto Expiry

Users may also set a time interval for expiration or deletion of messages sent to others. Messages are automatically deleted from the recipient Inbox once they are read or the time interval expires.

Scheduled Delivery

The sender can set the specific day and time when a message will be delivered to the recipient. Useful in sending messages at a specified time such as a reminder, timely notification of critical information etc.
