White Paper for 'Device Security' Feature

Poduct Feature – Device Security

With the increase in number and diversity of mobile devices being used for work, today businesses face complex challenges to maintain mobility with access to sensitive company data. As employees access corporate data from anywhere and at anytime, it becomes important for businesses to safeguard company data and information.

So, with mobile devices becoming a necessity for most business operations, certain features in gadgets may need to be regulated to prevent or limit misuse under special circumstances.

Now, consider this …

Your employees are accessing sensitive company data and confidential information via Smartphones and Tablets.What if the mobile device gets lost or falls into wrong hands?You are concerned about the possible misuse of sensitive company data—confidential information, classified papers, financial documents, research work, etc.—if the gadget is misplaced or stolen. Again, an employee swaps or changes the SIM provided by the company … or, the SIM is taken out of a lost or stolen mobile device.Apart from the possibility of losing your company's sensitive data and your employee's personal information, you are concerned about exposing confidential data regarding your channel partners, vendors, company associates, and customers.Again, an employee, for whatever reason, has opted for manual sync facility overriding administration directives for automatic, scheduled syncing of files.You realize this may negatively impact the safety and security of sensitive company data and the smooth synchronization of data across devices.You are concerned … How to remotely locate the mobiledevice and activate data wiping, locking, and device siren in case the gadget is lost or stolen? How to receive SIM swap or change notification? When required, how to remotely perform force sync in mobile devices?

This is where MobiOcean becomes your trusted companion. In a mobile-driven environment, comprising mobile workforce and mobile devices, MobiOcean helpsbusinesses to effectively and effortlessly managegadgets being used to access sensitive company data.

With MobiOcean, businesses can ensure the security of mobile devices by using 'Remote Triggers' for locating the device and activating device siren, locking, data wiping, force syncing, etc.

Presenting a robust security mechanism, MobiOcean allows organizations to:

Activate Phone / SD Card Data Wipe
